

Cara Koneksi VB.Net Dengan Excel Versi 2007

1. Membuat project baru
2. Membuat form seperti gambar di bawah ini
 - a. Tambahkan button
 - b. Tambahkan datagridview

3. Buatlah data di excel
4. Simpan data excel di folder DEBUG project anda

```
Imports System.Data.OleDb
Public Class Form2
    Dim CONN As OleDbConnection
    Dim CMD As OleDbCommand
    Dim DS As New DataSet
    Dim DA As OleDbDataAdapter
    Dim RD As OleDbDataReader
    Dim DT As DataTable
    Dim LokasiData As String

    Sub Koneksi()
        LokasiData = "provider=Microsoft.ace.OLEDB.12.0;data
source=book1.xlsx;Extended Properties=Excel 8.0;"
        CONN = New OleDbConnection(LokasiData)
        CONN.Open()
    End Sub
End Class
```

Pusat Kursus VB.Net & Bimbingan Tugas Akhir

```
Private Sub Button1_Click(ByVal sender As System.Object,  
ByVal e As System.EventArgs) Handles Button1.Click  
    Call Koneksi()  
    DA = New OleDbDataAdapter("select * from [sheet1$]",  
CONN)  
    DS = New DataSet  
    DA.Fill(DS)  
    DataGridView1.DataSource = DS.Tables(0)  
    DataGridView1.ReadOnly = True  
End Sub  
End Class
```
